

6 Reasons to Add UAK1000 Automation to Your Production Lines

To learn more about the UAK1000 Automation Kiosk visit oedatawatch.com/uak1000 or call 717-537-0646.

Up to 50% reduction in upfront costs
The UAK1000 features standardized software and hardware, including IIOT data retrieval, PLC and PC power, and preconfigured software that requires minimal engineering and eliminates schematics.

20% reduction in payroll and benefits
Centralized control of processes means fewer employees are required to achieve optimal line efficiency and performance. Automation of repetitive tasks can allow one operator to run multiple lines.

20% increase in good product, 15% reduction in scrap
Simplified coding streamlines locating, connecting, and troubleshooting any I/O. Production lines are able to run faster with greater uptime and produce better product quality with less scrap.

15% reduction in insurance premiums
The UAK 1000 reduces the cost of workman's compensation and insurance premiums and lowers the risk of lawsuits and fines by integrating OSHA compliance and Sil 3 E-stop circuits into the design.

20% bottom line increase per kiosk
Overall equipment effectiveness (OEE) data tracks performance for greater efficiency and higher production quality. Data warns when product drifts out of spec, so problems can be quickly corrected.

20% increase in line efficiency
Data can identify the most efficient line to run products. Efficiencies include uptime, throughput, product quality, material use, scrap reduction, and equipment performance.
